

Supplementary Figure 3. Choice Comparison type visual decision aid depicting modified Rankin Scale (mRS) disability level outcomes expected in late-presenting, imaging-selected patients when treated with medical management alone (A) vs. endovascular thrombectomy+medical management therapy (B), based on pooled DAWN (Clinical Mismatch in the Triage of Wake Up and Late Presenting Strokes Undergoing Neurointervention With Trevo)-DEFUSE 3 (Endovascular Therapy Following Imaging Evaluation for Ischemic Stroke 3) data. Figure freely available under a Creative Commons 4.0, use freely with attribution license. AIS, acute ischemic stroke.
