

Supplementary Figure 1. Kaplan-Meier estimate for primary endpoint in age ≥ 70 years group. Event-free survival of the primary endpoint in the patent foramen ovale (PFO)-closure group (red line) versus the medical-treatment group (blue line) (log rank $P=0.03$).

Supplementary Figure 2. Kaplan-Meier estimate for primary endpoint according to age. Graph showing primary endpoint event free survival in <60 years group versus ≥ 60 years group.
