

Supplementary Figure 2. Association of total cholesterol by ischemic stroke subtype. (A) Large vessel, (B) small vessel, (C) cardioembolism, (D) undetermined. Restricted cubic spline plot of association of total cholesterol (X-axis) with ischemic stroke subtypes. Spline curves truncated at highest and lowest 2% of values. Light blue shading denotes 95% confidence interval. All splines adjusted for age, sex, geographic region, and potential confounders (smoking, diabetes mellitus, physical activity, diet, psychosocial factors, waist-to-hip ratio, and alcohol intake).
