
Supplementary Figure 5. Cumulative incidence functions for all-cause mortality by air pollutant quartiles. Cumulative incidence curves for all-cause mortality within 1 year after discharge according to quartiles of the 3-month average post-discharge concentrations of (A) SO_2, (B) NO_2, (C) CO, (D) O_3, (E) PM_{10}, and (F) $PM_{2.5}$. *P*-values were derived using log-rank test. SO_2, sulfur dioxide; NO_2, nitrogen dioxide; CO, carbon monoxide; O_3, ozone; PM, particulate matter.
